As suggested by the Helix logo, biomedical, preclinical, and clinical science subjects are integrated and combined with applied behavioral sciences in a program to prepare graduates to provide excellent quality dental care to the public and to enter a changing world that will require them to be critical thinkers and lifelong learners. The 36-month curriculum leading to the degree of Doctor of Dental Surgery begins in July and is divided into twelve quarters, each consisting of ten weeks of instruction, one week of examinations, and a vacation period of varying length (between one and four weeks).

Integrated biomedical science instruction in human anatomy, biochemistry, physiology, pharmacology, and microbiology is offered over the first eight quarters, followed by multidisciplinary presentations of basic science foundations for clinical topics such as the importance of saliva, tissue aging, nutrition, and infection control. Throughout the curriculum, students learn to apply basic science knowledge to clinical problems using the scientific method of inquiry. Integrated preclinical instruction is concentrated in the first four quarters with students learning to work from a seated position in a modern preclinical simulation laboratory and with a chair-side assistant in conjunction with pediatric dental practice. Clinical work with patients is initiated in the fourth quarter.

The school is a pioneer in competency-based education, an approach that replaces the traditional system of clinical requirements with experiences that ensure graduates possess the skills, understanding, and professional values needed for the independent practice of general dentistry. Pacific is also known for its humanistic approach to dental education, stressing the dignity of each individual and his or her value as a person.

The Clinical Practice Strand of the Helix curriculum supports comprehensive patient care which is based on the concept of private dental practice where the student assumes responsibility for assigned patients' overall treatment, consultation, and referral for specialty care. In this strand, second-year students practice clinical dentistry approximately 15 hours per week and third year students practice approximately 33 hours per week. They learn to provide comprehensive dental care under the direction of a team of clinical faculty led by the Group Practice Leader (GPL).

The GPL teams with group practice mentors (GPMs) to supervise the following disciplines in each group practice: oral diagnosis and treatment planning, emergency dental care, simple periodontics, operative, fixed prosthodontics, removable prosthodontics, and simple implant cases. In addition, test cases in most of these disciplines are supervised by at least two members of the faculty team. There are three GPLMs in each group practice during a clinic session and students may work with all three mentors during the course of an appointment. The group practice model maintains a student to faculty ratio of approximately 5:1. The GPL monitors the progress of care and completes periodic case reviews with the patient and the student.

Each student provides care to all patients in his or her patient population. Occasionally, other caregivers, a second- or third-year student, resident, or faculty member, complete certain procedures in any given treatment plan. The GPL coordinates this process which also requires approval of the patient. The student dentist originally assigned to provide care to the patient maintains responsibility for care during all treatment provided by other practitioners.

The second- and third-year class is divided alphabetically into eight group practices. There are about twenty second-year and twenty third-year students in each group practice, which is managed by the GPL, who has overall responsibility for the care of patients by all students and faculty in the group practice. Other clinical disciplines are managed by faculty who do not have specific responsibility for a certain group of students. Specialists in endodontics manage all of those cases in a specified area of the clinic, including test cases. Periodontists manage most periodontal procedures. The Complex Care Clinic allows students to treat more technically difficult restorative cases under the supervision of trained faculty members with a low student-to-faculty ratio.

There are four discipline exceptions to the comprehensive care model: oral and maxillofacial surgery, pediatric dentistry, oral medicine/facial pain, and radiology. Students are assigned for two to three weeks in each of these disciplines, except for the oral medicine/facial pain rotations which are one day each. In orthodontics, students participate with faculty and orthodontic residents in adjunctive orthodontic care and in oral development clinics. Third-year students also rotate through the Special Care Clinic where they treat perinatal patients, dental-phobic patients, and patients with developmental disabilities. In addition, each student provides care in the hospital operating room on patients with specific health issues, including liver transplant patients.

Advanced clinical dentistry and evaluation of new developments and topics that involve several disciplines are learned in the third year in conjunction with patient care. Second- and third-year students participate in patient care at a number of extramural sites. These clinics are located in numerous treatment facilities around the Bay Area, and include acute care hospitals, community clinics, and skilled nursing facilities. At extramural clinic sites, students are taught by Pacific faculty in conditions that more closely resemble private practice. For example, students typically treat 4-6 patients during the course of a day. Rotations at these sites occur at a number of different times, including weekdays during the academic year, weekends, and vacation periods. Students typically find these experiences to be highly educational, teaching them how to provide excellent patient care in a more condensed time frame. Certain students also participate in externships to specialty programs during academic break periods, most often the four-week summer break.

Behavioral science aspects of ethics, communication, human resource and practice management, and dental jurisprudence are integrated throughout the curriculum. Epidemiology and demography of the older population, basic processes of aging, and dental management of hospitalized patients, geriatric patients, and those with the most common disabling conditions are studied during the third year.

Students are counseled individually with regard to establishing a practice and applying for postgraduate education. A weekend conference devoted to new developments in dentistry serves to acquaint students with opportunities for postgraduate education and with alumni views of the realities of dental practice.

IDS

As suggested by the Helix logo, biomedical, preclinical, and clinical science subjects are integrated and combined with applied behavioral sciences in a program to prepare graduates to provide excellent quality dental care to the public and to enter a changing world that will require them to be critical thinkers and lifelong learners. The 24-month curriculum leading to the degree of Doctor of Dental Surgery begins in July and is divided into eight quarters, each consisting of ten weeks of instruction, one week of examinations, and a vacation period of varying length (between one and four weeks).

Preclinical instruction is concentrated in the first two quarters with students learning to work from a seated position in a modern preclinical simulation laboratory and with a chair-side assistant in conjunction with pediatric dental practice. Clinical work with patients is initiated in the third quarter.

The school is a pioneer in competency-based education, an approach that replaces the traditional system of clinical requirements with experiences that ensure graduates possess the skills, understanding, and professional values needed for the independent practice of general dentistry. Pacific is also known for its humanistic approach to dental education, stressing the dignity of each individual and his or her value as a person.
The Clinical Practice Strand of the Helix curriculum supports comprehensive patient care which is based on the concept of private dental practice where the student assumes responsibility for assigned patients’ overall treatment, consultation, and referral for specialty care. In this strand, first-year students practice clinical dentistry approximately fifteen hours per week and second-year students practice approximately thirty-three hours per week. They learn to provide comprehensive dental care under the direction of a team of clinical faculty led by the Group Practice Leader (GPL).

The GPL teams with group practice mentors (GPMs) to supervise the following disciplines in each group practice: oral diagnosis and treatment planning, emergency dental care, simple periodontics, operative, fixed prosthodontics, removable prosthodontics, and simple implant cases. In addition, test cases in most of these disciplines are supervised by at least two members of the faculty team. There are three GPMs in each group practice during a clinic session and students may work with all three mentors during the course of an appointment. The group practice model maintains a student to faculty ratio of approximately 5:1. The GPM/GPL monitors the progress of care and completes periodic case reviews with the patient and the student.

Each student provides care to all patients in his or her patient population. Occasionally, other caregivers, a second- or third-year student, resident, or faculty member, complete certain procedures in any given treatment plan. The GPL coordinates this process which also requires approval of the patient. The student dentist originally assigned to provide care to the patient maintains responsibility for care during all treatment provided by other practitioners.

The first- and second-year IDS class is divided alphabetically into eight group practices. There are about 40 students in each group practice, including IDS students. Each group practice is managed by the GPL, who has overall responsibility for the care of patients by all students and faculty in the group practice. Other clinical disciplines are managed by faculty who do not have specific responsibility for a certain group of students. Specialists in endodontics manage all of those cases in a specified area of the clinic, including test cases. Periodontists manage most periodontal procedures. The Complex Care Clinic allows students to treat more technically difficult restorative cases under the supervision of trained faculty members with a low student-to-faculty ratio.

There are four discipline exceptions to the comprehensive care model: oral and maxillofacial surgery, pediatric dentistry, oral medicine/facial pain, and radiology. Students are assigned for two to three weeks in each of these disciplines, except for the oral medicine/facial pain rotations which are one day each. In orthodontics, students participate with faculty and orthodontic residents in adjunctive orthodontic care and in oral development clinics. Second-year students also rotate through the Special Care Clinic where they treat perinatal patients, dental-phobic patients, and patients with developmental disabilities. In addition, each student provides care in the hospital operating room on patients with specific health issues, including liver transplant patients. Advanced clinical dentistry and evaluation of new developments and topics that involve several disciplines are learned in the second year in conjunction with patient care. Second-year students participate in patient care at a number of extramural sites. These clinics are located in numerous treatment facilities around the Bay Area, and include acute care hospitals, community clinics, and skilled nursing facilities. At extramural clinic sites, students are taught by Pacific faculty in conditions that more closely resemble private practice. For example, students typically treat 4-6 patients during the course of a day. Rotations at these sites occur at a number of different times, including weekdays during the academic year, weekends, and vacation periods. Students typically find these experiences to be highly educational, teaching them how to provide excellent patient care in a more condensed time frame. Certain students also participate in externships to specialty programs during academic break periods, most often the four-week summer break.

Behavioral science aspects of ethics, communication, human resource and practice management, and dental jurisprudence are integrated throughout the curriculum. Epidemiology and demography of the older population, basic processes of aging, and dental management of hospitalized patients, geriatric patients, and those with the most common disabling conditions are studied during the final year.

Students are counseled individually with regard to establishing a practice and applying for postgraduate education. A weekend conference devoted to new developments in dentistry serves to acquaint students with opportunities for postgraduate education and with alumni views of the realities of dental practice.

Endodontics

Endodontic residents participate in a comprehensive 27-month program designed to provide in-depth clinical training in endodontics, supported by a solid foundation of coursework in the biologic principles that uphold the specialty. In addition to a curriculum that nurtures the clinician-scientist, the program offers clinical experiences with an extensive patient demographic supported by the School of Dentistry and a community dental clinic that is part of an expansive health care network in the East San Francisco Bay Area. Each resident will also engage in an investigative project and complete an acceptable thesis to qualify for the Master of Science in Dentistry degree. The thesis is typically submitted for publication in scientific journals. Classes begin each July. Residents are scheduled for classroom and clinical instruction five full days (and some evenings) per week and full participation is required.

More information on the program, including admissions requirements, curriculum and schedule, graduation and certification requirements are available here (http://dental.pacific.edu/Academic_Programs/Advanced_Education_Program_in_Endodontiology.html).

Orthodontics

Pacific’s orthodontics residency program, instituted in 1971, is fully accredited by the Commission on Dental Accreditation, and is recognized for educational eligibility by the American Board of Orthodontics. The program’s courses prepare the resident to provide excellent treatment based on contemporary biologic orthodontic principles.

Faculty members foster the humanistic atmosphere with informal professional relationships and mutual respect with the residents. Clinical instruction and practice are conducted in the orthodontic clinic.

Residents treat an entire range of orthodontic problems during seven half-day clinics per week including instructions in general orthodontics, mixed dentition treatment, surgical orthodontics, mini-implants, and Invisalign. Adult patients constitute about one-fourth of a resident’s case load. Each resident starts approximately 50 new patients and is transferred approximately 60-80 existing patients. Fixed appliance treatment employs the edgewise technique although instruction permits a wide latitude of clinical variation based on patient needs and faculty supervision.

Each resident engages in an investigative project and must complete an acceptable thesis to qualify for the Master of Science in Dentistry degree.

Residents are scheduled for didactic and clinical instruction five full days per week and full participation is required. While there is no prohibition of weekend private dental practice, residents’ commitments during the program seriously limit this opportunity.

More information on the program, including admissions requirements, curriculum and schedule, graduation and certification requirements, and the Research Fellowship Program are available here (http://dental.pacific.edu/Academic_Programs/Graduate_Orthodontics_Program.html).

Oral and Maxillofacial Surgery Residency Program

Residents receive a thorough foundation in the basic biomedical sciences, including anatomy, pathology, pharmacology, and physiology. Clinical practice includes dentoalveolar surgery, comprehensive management of the implant patient, comprehensive management of dentofacial and
craniofacial deformities, surgical management of pathologic lesions, temporomandibular joint surgery, aesthetic surgery, reconstructive surgery and management of cleft lip and palate, and trauma management.

The residency is 48 months in length, and is divided into 34 months of oral and maxillofacial surgery, five months of anesthesia (of which one month is pediatric anesthesia), two months of medicine, four months of general surgery (including trauma), two months of plastic surgery, and one month of oral pathology. There are several hospitals and clinics to which the resident is assigned including Highland Hospital, Kaiser Hospital in Oakland, Children’s Hospital of Oakland, and the University of the Pacific School of Dentistry clinics.

As a senior resident, four months are spent as chief at Highland Hospital where trauma, pathology, reconstructive surgery and aesthetic surgery are prevalent. Four months are spent at Kaiser Hospital where orthognathic cases are seen in great numbers. Four months are spent at Children’s Hospital, as part of a craniofacial anomalies team. Cleft lip and palate, congenital and acquired craniofacial deformities and orthognathic surgery are prevalent.

Stipend
Residents receive salaries from PGY1 to PGY4.

Admission Requirements and Application
To apply to the program, a candidate requires an undergraduate degree, transcripts showing a DDS or DMD degree, a completed PASS application, National Board of Medical Examiners (NBME) Comprehensive Basic Science Examination (CBSE) score, and three letters of recommendation. University of the Pacific Highland participates in the National Matching Service.

Advanced Education in General Dentistry
The University of the Pacific, Arthur A. Dugoni School of Dentistry houses its Advanced Education in General Dentistry residency program in Union City, located approximately 35 miles southeast of San Francisco.

The AEGD program is a one-year accredited postgraduate residency in general dentistry with an optional second year. The core of the program involves advanced clinical treatment of patients requiring comprehensive general dental care. There is a comprehensive seminar series that covers all dental specialties. The residents provide dental care to people with complex medical, physical, and psychological conditions. While enrolled in the program, residents provide comprehensive dental care, attend supplemental seminars and rotations, and supervise dental students. Senior pre-doctoral students regularly rotate from the dental school in San Francisco. Union City residents are directly involved in the clinical education of these students, giving residents unique teaching experience.

The start date for the program is July 1. Residents have time off during the school’s winter break and 10 days leave that can be scheduled with the approval of the site director.

Applicants must show record they have graduated from North American dental school. There is no tuition required to participate in the program. Residents receive an educational stipend plus an incentive bonus based on clinical production. The program uses the American Dental Education Association’s PASS application to receive application materials. For online information about the Pacific AEGD program application process, please click here (http://www.dental.pacific.edu/Academic_Programs/Advanced_Education_in_General_Dentistry/Application_Process.html).

International General Dentist Educator Program
In this five-year program, the first two years consist of participating in the AEGD program, and the remaining three years consist of attaining a masters or doctorate in professional education and leadership from the university’s Benerd School of Education.

The clinical residency and graduate program for international dentists is a dual-track program consisting of clinical and didactic education. The clinical track is mainly intended to prepare the candidate for a career in patient care and clinical education. The didactic track and teaching practicum are mainly intended to prepare the candidate for a full-time career in dental academia. However, each track may have overlapping features in terms of purpose.

Clinical education is provided under a two-year residency program leading to a clinical certificate upon completion of both years one and two. Didactic education is provided under the two-year graduate program leading to a Master’s in Education with the potential of a Doctorate Degree in Professional Education and Leadership. The final year of the program will consist of completing the dissertation project if not completed in the previous year, and teaching practicum in didactic, pre-clinical, and clinical education of doctoral students.

Please click here (http://www.dental.pacific.edu/Academic_Programs/International_General_Dentist_Educator_Program.html) for more information about this program.

Dental Hygiene Program
The Arthur A. Dugoni School of Dentistry and the University have combined to offer a unique 36-month accelerated Bachelor of Science degree in dental hygiene, one of only two such programs in the nation. Pacific has created this distinctive three-year baccalaureate program (eight semesters including summer sessions) to attract highly-qualified students. In addition to clinical practice, the baccalaureate hygiene degree allows entry into many positions in teaching, research, administration, public health, private industry, and other areas of dental hygiene practice, as well as eligibility for entry into advanced degree programs. Detailed information on the dental hygiene program is available here (http://catalog.pacific.edu/previouscatalogs/2014-15/general/arthuradugonischoolofdentistry/dentalthygiene) or from the office of Admissions on the Stockton main campus at 209-946-2211.

Mission
The mission of the University of the Pacific Baccalaureate Dental Hygiene program is consistent with the mission and educational goals of the dental school.

The dental hygiene program will:
• Educate individuals who, upon completion of the program, will be professionally competent to provide quality dental hygiene care in an evolving profession
• Provide patient-centered, quality care in an efficient clinical model that demonstrates the highest standards of service achievable
• Provide opportunities for community-based, experiential learning

The program and its graduates will be distinguished by the following attributes:
• Continuous enhancement through professional development
• Humanistic values that respect the dignity of each individual and foster the potential for growth in all of us
• Application of theory and data for continuous improvement
• Leadership in addressing the challenges facing the profession of dental hygiene, education, and our communities
The Study of Dental Hygiene

The dental hygiene course of study is a professional program where students learn to provide preventive clinical care for patients with emphasis on recognition, treatment, and prevention of oral diseases. In addition to performing a variety of preventive and therapeutic functions, the dental hygienist also has a major role in counseling and educating patients, community groups, and other health professionals. The curriculum helps students build the educational, communication, and clinical skills necessary to work in co-therapy with the dental team.

Facilities

The program is located on the University’s Stockton campus in a state-of-the-art facility shared with pharmacy, physical therapy and speech-language pathology programs. The clinic provides the opportunity for hygiene students to provide co-therapy with dental students on extramural rotation from the San Francisco campus. The University of the Pacific’s Health Sciences Learning Center and Clinics offers students an exceptional learning environment and the community an excellent resource for dental services.

Admission Requirements

Admission to the Dental Hygiene Program is competitive and based on merit. Students may apply either as a freshman student, doing prerequisite coursework at Pacific, or as a transfer student, completing prerequisites at another institution. After review of the completed application, the Office of Admissions will invite qualified candidates to participate in interviews on campus. In addition to a personal interview, applicants are invited to take part in orientation and financial aid seminars, meet informally with current students, and tour the campus. Admission will be based on the combination of application information and interview.

Please click here (http://www.pacific.edu/Admission/Undergraduate/Applying/Dental-Hygiene.html) to see detailed admissions information.

Program Description

The bachelor of science degree in dental hygiene is a professional program presented in an accelerated year-round format of eight semesters, including summer sessions. Students accepted into the program as freshmen complete all sessions with the University. Transfer-level program entrants, with prerequisites fulfilled, complete the final four semesters of professional coursework only.

In the first half of the program, prerequisite general education courses are presented to provide a strong science background and a broad base in the humanities designed to strengthen dental hygiene science and clinical practice. Students undertake this portion of their course work, which is provided by the College of the Pacific, with the general undergraduate student population on the main campus. The student must maintain a 2.7 GPA or better in lower-division coursework to proceed into the professional portion of the program.

In the first half of the program, prerequisite general education courses are presented to provide a strong science background and a broad base in the humanities designed to strengthen dental hygiene science and clinical practice. Students undertake this portion of their course work, which is provided by the College of the Pacific, with the general undergraduate student population on the main campus. The student must maintain a 2.7 GPA or better in lower-division coursework to proceed into the professional portion of the program.

The professional portion of the program is a highly-structured four semesters of upper division coursework that includes both didactic and clinical experience. This portion of the program is presented by the Arthur A. Dugoni School of Dentistry Dental Hygiene Program on the Stockton campus.

Dental Hygiene Licensure

Completion of the program enables graduates to take national and regional or state licensure examinations. For California examination information contact:

Dental Hygiene Committee of California
2005 Evergreen Street, Suite 1050
Sacramento, CA 95815
http://www.dhcc.ca.gov/
(916) 263-1978 (916) 263-1978

General Education Curriculum

Presented in the first half of this 36-month year-round program are general education courses providing a strong science background and a broad base in the humanities.

Please click here (http://catalog.pacific.edu/previouscatalogs/2014-15/general/arthuradugonischoolofdentistry/dentalhygiene) to see more about the general education requirements in this program.

Dental Hygiene Curriculum

Professional training is undertaken in the second half of the program. The curriculum provides students with the knowledge of oral health and disease as a basis for assuming responsibility to assess, plan, implement and evaluate dental hygiene services for both the individual patient and community oral health programs.

Please click here (http://catalog.pacific.edu/previouscatalogs/2014-15/general/arthuradugonischoolofdentistry/dentalhygiene) to see more about the professional training requirements in this program.
